

Indent-A-Mark® Steel Type & Dies

Precision engraving provides superior quality dies

Marvel steel type & dies are designed for insertion into stamping, rolling, embossing or forming fixtures and other tools. Any style of character, symbol or trademark can be supplied for hot or cold marking on flat, curved, concave or convex surfaces. Regardless of shape, size or character style, Marvel can furnish the type exactly as required.

Triumph Steel Type & Holders

For light to medium indenting jobs, Triumph type can indent up to 3/16" high characters on tin, aluminum and other soft metals. The spring mortise lever on the hand-style type holder secures and provides quick type changes. Select among three holder sizes. A nick on the body of the type permits easy orientation of characters in the Triumph holder. The type can also be used with Shank Type holders in impact presses or with Dove Tail holders in roll marking machines.

Champion Steel Type & Holders

For indenting up to 1/2" (12.70 mm) high characters on steel and other metals, select our Champion Steel Type and Holders. The positive locking spring clip holds the grooved-body type securely and provides quick type changes. The holder can be gripped easily and is engineered for safe and accurate use. Four holder sizes are available.

Midget Champion Steel Type for George T. Schmidt Holders

The equivalent of Hi-Duty and Hi-Lay straight groove type manufactured by George T. Schmidt, this type is used in many of their Model P and Model S type holders.

Hand Stamps

Hand indenting is useful for permanent indenting applications with low production runs where the manufacturing process does not allow for an automated system. Three types of hand stamps are available: Safety Befel, Lo-Stress, and Dot Design.
